## **eWaterOnline Making Drinking Water Safe with Water Filtration, Reverse Osmosis, Ultraviolet Sterilization and More**

Frederick, PA – (10 January 2010) [eWaterOnline](http://www.eWateronline.net) (www.eWateronline.net), a division of **CAI Technologies, Inc** (CAI), is making drinking water safe with [water filtration products](#), [reverse osmosis drinking water systems](#), [ultraviolet \(UV\) sterilization systems](#), [water softeners](#) and a wide range of other products that can be easily installed by the homeowner to improve the quality of the water that is consumed and bathed in daily.

According to a recently published series of articles by the **New York Times** (NYT) called “Toxic Waters”, severe contamination in U.S. drinking water systems continues to escalate. More than 60,000 chemicals are in use in the United States with only 91 regulated in the now-outdated Safe Drinking Water Act of 1974. The articles state that no chemicals have been added to the regulated list since the year 2000 and it does not appear that regulations will tighten in the near future.

“According to the New York Times articles, in the last five years, more than 20% of U.S. drinking water systems have violated clean-water regulations,” said Bill Cook, Water Treatment Sales Manager at CAI. “Cash-strapped municipalities are sometimes at a loss to locate the funds required for proper repair or needed expansion.

“The articles go on to state that municipal sewage systems in some areas are operating beyond design capacity and in three years over 9,000 of 25,000 overwhelmed municipal systems in the U.S. reported the release of untreated or partially treated human waste or chemicals into rivers and lakes.”

According to Cook, as alarming as this news is, the fixes are rather easy using the wide variety of products available at eWateronline. Water filtration and purification products from eWaterOnline eliminate staining and remove objectionable tastes, odors, metals, sediments and chemical and biological contaminants while neutralizing the pH and making the water completely pure and safe.

The NYT articles also state that chemical, manufacturing and other workplaces have reported more than ½ million violations of water pollution laws in the past five years. Fertilizers, weed killers, pharmaceuticals, leaking underground gasoline storage tanks and a host of other contaminants are entering into our drinking water supplies at alarming rates.

“We’re here to educate the public on the risks and deliver the solutions that are right for each individual application to keep them, their families and their work places safe,” Cook concluded.

### **ABOUT EWATERONLINE.NET**

eWaterOnline.net is a division of **CAI Technologies, Inc.**, a long-established provider of water treatment equipment across the U.S. since 1991. CAI offers free shipping from warehouses strategically located throughout the country in Pennsylvania, Florida, Chicago, Texas, Nevada and California. For more information on CAI’s products and water-treatment consumer assistance services, visit [www.eWaterOnline.net](http://www.eWaterOnline.net) or call (800) 580-3033.
